

90-DAY QUICK WINS · MERIDIANFS HOLDINGS, INC.

90-Day Quick Wins

Financial services · 15 June 2026

Quick wins are AI patterns you can put in production in 90 days or less. Each has documented enterprise deployments with measurable results. They build momentum and prove execution capacity while the strategic roadmap takes shape through Discovery.

Intelligent Invoice Triage

AI categorizes and routes invoice exceptions, reducing manual AP team workload.

What this would do for MeridianFS Holdings, Inc.: Reads incoming invoice exceptions (mismatch, missing PO, unknown vendor, formatting errors), categorizes them, identifies the likely resolution path, and routes to the right handler with a suggested resolution. Routine cases auto-resolve; complex cases reach humans with context gathered.

Prerequisites you have: ✓ Existing AP system with structured exception logging ✓ 6+ months of historical exception data

Expected outcome: AP exception handling time reduced 40-60%. Routine auto-resolution 25-40%.

Timeline to value: 8-10 weeks **Effort:** Low

Customer Support Ticket Categorization and Routing

AI reads inbound customer tickets, categorizes by intent, and routes to the right specialist team.

What this would do for MeridianFS Holdings, Inc.: Parses inbound tickets (email, chat, web form), identifies request type, urgency, and product area, and routes to the team most likely to resolve quickly with extracted context attached.

Prerequisites you have: ✓ Ticketing system with structured data ✓ Categorization taxonomy mapped to teams

Expected outcome: First-contact resolution +15-25%. Avg resolution time -20-35%.

Timeline to value: 6-10 weeks **Effort:** Low

Knowledge Base Search Enhancement

AI improves internal knowledge base search, surfacing relevant content from imprecise queries.

What this would do for MeridianFS Holdings, Inc.: Replaces keyword search with semantic understanding, returns the most relevant documents with extracted answer snippets, and learns from which results actually answered the question.

Prerequisites you have: ✓ Existing knowledge base with reasonable content quality ✓ Permission to index content

Expected outcome: Search success +30-50%. Internal ticket deflection +15-25%.

Timeline to value: 4-8 weeks **Effort:** Low
